Description

The Dell XPS 15 9570 CNX97003 is a 15.6-inch laptop with an NVIDIA GeForce GTX 1050Ti video card and 16GB RAM, so you can play most games at high settings while streaming. Thanks to the 16GB RAM, you can run programs like Discord and OBS in the background without a problem. You don't just game more smoothly, thanks to the 512GB SSD, you also don't have to wait as long for the loading screen to disappear, and you'll have more storage space to install multiple demanding games. Thanks to the new 2x2 WiFi from Intel, your wireless connection is much more reliable, so there's less chance of a laggy connection spoiling your fun during a multiplayer.
