12-Key Telephone Keypad

Features

The Polycom Soundstation 2 Non-Expandable Conference Phone With Display is a solution for small to midsize conference rooms with up to 10 participants. Using the company's Acoustic Clarity technology, the device delivers clear voice quality without drop outs or clipping so that meetings can be more productive. Users can speak in a normal voice and be heard from up to 10' away.

Dynamic Noise Reduction (DNR) actively removes background noise such as projectors and ventilation systems while using three cardioid microphones for 360° coverage. Intelligent mixing highlights the

person speaking not ambient noise while also resisting interference from mobile phones and other devices.

The device provides several advanced features, enabling voice calls to be more flexible. The Polycom Soundstation 2.5 provides you to connect to a computer for computer-aided calls from locations without analog phone lines or to a computer for internet calling. A large backlit display

displays easily visible call information and telephone functions. The unit can connect to any standard analog

telephone line making it easy to set up. With traditional telephone features like redial, mute, transfer, and

hold you have a fully featured conference phone that is both familiar and easy to use.

Polycom Acoustic Clarity Full Duplex

3 x cardioid microphones
