I have a pc for esports games 1080p high refresh rate (144hz+) or to play AAA titles in 1440p ultra settings RTX on and DLSS in quality mode 60+ FPS as in Cyberpunk 2077 and 70+ fps in Red Dead Redemption 2 with DLSS off and 90+ FPS with DLSS in quality mode. I'm selling this pc due to moving house in the future so I'm asking for a very low price compared to market values. In case of interest it is possible to test the pc in cinebench blender corona vray games or even some other program that I have not remembered :-).

THIS PC IS FORMED BY:
