I am not the seller but you can find this quad here in the Marketplace .  
I used the quad. It is not a good all-purpose vehicle, it is usable at most.  
The handles don't work because the whole handles are rusty. The sixth one is not good either. When I changed the handles (Chinese) I completely fixed it but it gets stuck again and again and it is noisy. The cold start does not work because of this the carburetor screw , the starter must always be screwed up with the first start and when it is warm again to put it back. The electrical part is not working either. The turn signal starts up very slowly and the light switches are not wired correctly (e.g. the first light always lights up when you push the button). I have used it for about 30-40 hours but it was used before me so oil change and valve adjustment should be done. The air filter also needs to be changed. The front wheel hubs are at my place it should also be replaced (if someone buys and gives an address free send me a post
