New Yubikey in Yubikey 5 series: Multi-Protocol Security Key

Two-factor authentication (2FA) is also called two-step verification (2SV). It adds an extra layer of security to your account giving you, and only you, access to prove your identity.

Millions of people use YubiKeys for 2FA because they are the easiest to use, super secure and affordable. Plug in your YubiKey and tap it to log in to your computers, networks, and online services. Keep one on your keychain with your home/car key and a second YubiKey in a safe place as a backup.

Different services use different types of security protocols. YubiKeys can run multiple protocols, so you can use the same key for almost an unlimited number of services.

In one device, the YubiKey 5C NFC has both contact (USB-C) and contactless communication (NFC, MIFARE). It supports one-time password, smart card functionality including OpenPGP and PIV, and the growing FIDO Alliance Universal 2nd Factor (U2F) protocol.

The YubiKey 5C NFC can be used to secure access to a wide variety of applications, including remote access and VPN, password managers, computer login, FIDO2 U2F login (Gmail, GitHub, Dropbox, etc.) content management systems, popular online services and much more.

Special YubiKey 5C NFC Features
Works with Microsoft Windows, Mac OS X, Linux operating systems, major browsers and Android NFC phones and tablets.

Supports multiple authentication protocols including YubiOTP, smart card, FIDO2 U2F Passwordless Login and support for WebAuthn
Mobile authentication via NFC contactless technology (NDEF Type 4), works with Android and other devices (Yubikey 5 NFC and YubiKey 5C NFC) Monitor hardware-secured elements your encryption keys
