SW-Motech Engine guard / skid / bash plate Yamaha Ténéré 700 DM16 (22-23) Item Number: MSS.06.799.10001/B

2 weken geleden gekocht, maar smaken verschillen. (en mijn smaak om de week blijkbaar)
Super robuust en de beste keuze voor 100% bescherming, maar ik gebruik de T7 99% op de straat.

This engine guard made of 4 millimeter-thick aluminum sheet was specially developed for the Yamaha Ténéré 700. It protects the oil filter and other engine parts that make up the crossplane engine. Additional protection against rocks and contact with the ground for the engine: the high-quality, aluminium alloy engine guard shows what it's capable of off the street, but provides extra safety and an individualized look on the streets, too. State-of-the-art production gives these bike-specific protectors a secure fit. The installation on frame mounting points lends additional stability and allows for easy installation.

Underbody protection from rock chips and collisionOffer more protection through secure and stable attachment pointsReliable and easy installation on original attachment points, modifications to the motorcycle are not requiredBike-specific development for perfect fitMounting material included in deliveryDurable design made of high quality aluminum alloy
