

Car Computer Diagnostics (35 EUR)

Locatie **Zuid-Holland, The Hague**
<https://www.advertentiax.nl/x-1737425-z>

Computer diagnostics of a car - prevention of errors and technical failures in the operation of electronic microprocessors of cars. If such a check is not carried out in a timely manner, there is a danger of breakdowns, the elimination of which requires large expenses, not to mention the threat to the lives of the driver and passengers.

Comprehensive diagnostics involves checking the engine, automatic transmission and manual transmission, brake system, suspension, optics, electrical supply, and security systems. Specialized software allows you to decipher encoded information indicating malfunctions. You get an explanation of the cause of the problem, as well as advice on how to solve it.

—> What is included in the tasks of computer diagnostics:

1. Identification of obvious and hidden malfunctions, for example, unstable engine operation, loss of power, uneven or increased fuel consumption;
2. Assessment of the technical condition of electronic systems;
3. Assessment of the performance of the on-board system.
