

SOtM switch sNH-10GampCLK-EX en SOtM voeding SPS 500 (1.700 EUR)

Locatie **Utrecht, Baarn**
<https://www.advertentieX.nl/x-1759895-z>

Voor de echte fijnproever, de SOtM sNH-10G&CLK-EX EVOX/EABS/Silver upgrade, no master clock input (usb). Dit is de allerbeste uitvoering van deze switch en speelt elke andere switch van de tafel in de prijsklasse en ver daarboven!

Dit in combinatie met de allermooiste uitvoering van de bijbehorende voeding, de SPS 500 EVOX/EABS Copper upgrade.

Inclusief Y-dc kabel 60cm, star quad cable met Oyaide 5.5/2.1& Oyaide 5.5/2.5 connectors.

Inclusief enkele dc kabel, 30cm., Neotech UPOCC 7N Copper met Oyaide 5.5/2.1.

Beide kabels spelen op minimaal eenzelfde niveau als de oorspronkelijke level 2 dc-kabel die wordt aangeboden, de Neotech zelfs op een hoger niveau.

Originele verpakking, inclusief accessoires.

Nieuwprijs van de switch €2098, de voeding €718,-

Nu voor €1700,-, vaste prijs. Beluisteren is vanzelfsprekend mogelijk.

Afhalen heeft de voorkeur, verzendkosten (en risico) zijn voor de koper.

SWITCH:

SOtM sNHG-10G with sCLK-EX Clock board

It won't be an easy chance to have as rich and beautiful time as listening to music with a good quality audio system, in addition, if sound of the system is good enough, it will be the most pleasant time to enjoy.

Please enjoy the time, many audiophiles invest a lot of time and money to their system. And they will understand that the most important journey is only possible in the passion of the music.

However, we wonder how many audiophiles would have satisfied with sound in their system. Especially with a network audio system, you will know from your own experience that it is not very easy to overcome and resolve all variation from the network circumstances. It also occurs with an ultra high-end system, mainly due to the lack of technology development so far, particularly, the physical network transmission technology is the key point to be considered in this subject.

Not all of the physical network connections use the special techniques developed for audio transmission, even though there are a variety of high-end digital audio devices, and eventually it brought a lack of musical fidelity which should not be performed as high-end audio devices.

So the sNH-10G is now available, it is the network switch developed to overcome such low performance in a network environment, and it is finally able to give you a solution in your network audio system fundamentally.

The input and output terminals consist of eight LAN ports and two SFP ports. And there is also an option to install the sCLK-EX and the 10 MHz master clock input connector to further maximize sound quality. With these options and high-performance network cables, such as the dCBL-CAT7, your network audio system will be able to perform with more realistic textures, wider sound stage and explosive dynamics without losing the detail of the entire range.

In addition, the beautiful carving design representing the melody of music with a luxurious aluminum body simply proves the differentiation's from some conventional network products in all aspects.

No matter what high end audio system you currently have, experience the sNH-10G to prove what the ultimate sound should be in your network system.

KEY FEATURES

- Designed for high end network audio
- Specially designed Ethernet noise filter
- Support 10, 100, 1G ethernet
- 8 x RJ-45 ports
- 2 x SFP ports
- LED indicator on/off function
- sCLK-EX High End clock module
- 10MHz master clock input (Optional)
- Wide range of power input(6.5v ~ 12v)
- sNH-10G Special Upgrade Edition

For audiophiles who are looking for the best sound quality with their sNH-10G, the sNH-10G Special Edition further upgrades this fantastic network switch with the addition of eABS-200 EMI absorber sheet (eliminating EMI noise), replacing internal wires with 7N-UPOCC silver or copper, and upgrading existing capacitors with EVOX capacitors.

Voeding:

The resolution, textures, transparency and expression of sound is greatly affected by how and what power is supplied to your audio device. A power supply unit affects the quality of the entire audio system, and should never be considered as just a power supply unit.

The sPS-500 is an audio power supply designed specifically for high performance audio. It is built to eliminate noise generated by powered devices as well as to simply remove noise coming from an AC power source.

Using SOtM's unique technologies for noise cancellation and sound enhancement, and high quality audio components that are already proven in sound quality, you will hear superior sound improvement with the well-designed sPS-500.

The sPS-500 can easily cope with a wide range of AC power input – the output voltage can change to 7Vdc, 9Vdc, 12Vdc or 19Vdc depending on the power specification of your audio equipment – and the 50W output is flexible enough to be applied to various audio systems. It is also designed to provide more stable power through the input, output, overcurrent and overheat protection circuits.

The rich texture and detailed, luxurious sound created with the technology of the new sPS-500 will create a new listening experience with your audio system. A unique and impressive exterior design also makes the sPS-500 stand out from the crowd. The sPS-500 will help bring your audio system up to the next level.

The adapter is adjustable to an output voltage of 7 V, 9 V, 12 V or 19 V DC. You will receive both a mains cable and a DC cable. The standard configuration with standard cables will cost you 599 EURO (incl. VAT). A LED is also provided to indicate that the power supply is doing its job; this is included in the price. Ultimately, the adapter must provide a noise-free supply voltage. Of course, it is up to the connected device what happens next. But starting as clean as possible is not a bad thought.
