Zowel voor HP laptops met de stroomvraag 19.5V 6.5A 120W te gebruiken als voor 18.5V 6.5 120W. Bij deze HP series zijn deze voedingen technische hetzelfde en is de afwijking binnen de toleranties. Veel FAQ antwoorden geven dit dan ook aan.

It is likely to work fine. The voltage is not too likely (though it is not \*quite\* perfect), because the charger is designed to limit the current to limit the temperature of the components. The operating current of the voltage is not too high, so the circuit designed would be unconcerned by such a small change of voltage, and that is true of every engineer I have talked to who designs such circuitry.

A charger with a higher voltage than the correct one would be much more likely to cause damage, because the components used have a limited voltage rating, and if it is exceeded then dramatic failure could occur.

---

The circuitry that steps the voltage down to charge the battery can accommodate for slightly higher or lower input voltage. You should notice no difference in functionality.

I believe you are asking whether you can use a charging adapter that is rated 18.5 volts for a laptop that wants 19.5 volts. You didn't specify the amperage capability of the adapter, but most of them are similar. My answer is: It may work nicely. Or, it may charge the battery when the laptop is shut down. Or, it may run the laptop but only when the battery is fully charged. Or, it may not work at all. What it will NOT do is damage your laptop

Can an HP 18.5V charger charge a HP 19.5v laptop?

Carl Griffiths: Former Founder Fellow of Inst of Diag. Engineers

It may work depending on the actual circuits involved. It is only 5% lower and many chargers are only 19.0 Volts and work fine.
