Recently serviced with new front tires and passed APK inspection on 21 February 2024. Installed with a fresh battery in September 2023. This Japanese-made vehicle has been trouble-free since I bought (July 2022), with a sturdy engine. Selling to upgrade to a newer, larger model. Fuel-efficient, averaging 5.5-6.5 lt/100km (real measurements). Minor cosmetic flaws expected with age, visible in provided photos. Mileage will increase due to daily commute. The air conditioner is not currently functioning; it may require repair or just a refill of gas. Feel free to have your mechanic inspect the car before.
