

## OBD CHIPTUNING DIESEL EN OBD CHIPTUNING BENZINE vanaf 150,- (150 EUR)

Locatie **Gelderland, Harderwijk**  
<https://www.advertentiax.nl/x-193153-z>

OBD CHIPTUNING DIESEL EN OBD CHIPTUNING BENZINE OP MAAT VOOR SCHERPE PRIJZEN  
 VANAF 149,- EURO!

MEER PK&apos;S, MINDER BRANDSTOF

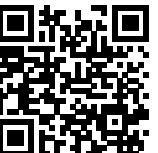

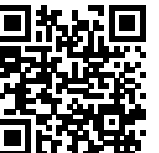

Wat is Chiptuning?

De meeste motoren in moderne auto&apos;s worden door een Electronic Control Unit (ECU) aangestuurd. Deze regelt continu onder meer de ingespoten hoeveelheid brandstof, de turbodruk en het ontstekingstijdstip. Bij chiptuning bewerkt men de programma&apos;s die aan de hand van vele parameters het motormanagement vormen. De chips in een ECU zijn geladen met software. Vaak zijn deze programma&apos;s geschreven ver binnen de maximale belasting van de desbetreffende automotor. De ruimte biedt dus de mogelijkheid de automotor te chiptunen, zonder dat de motor onherstelbaar beschadigd raakt.

Al onze tuningen worden op maat gemaakt.

Chiptuning: +30Hp - +70Nm

Wij kunnen vrijwel alle merken auto&apos;s tunen.

|                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                     |
