

Yatour carkit voor Volvo HU radio

Locatie **Drenthe**, **Emmen**

https://www.advertentiex.nl/x-1975079-z

This interface makes it possible to play music from a mobile phone or other device with Bluetooth support in CD quality through your car radio. The interface / audio adapter also has an AUX IN audio connection, so that all external sound sources (MP3 players, iPod, iPhone, iPad, PSP and mobile phones) can be connected via a 3.5 mm jack input.

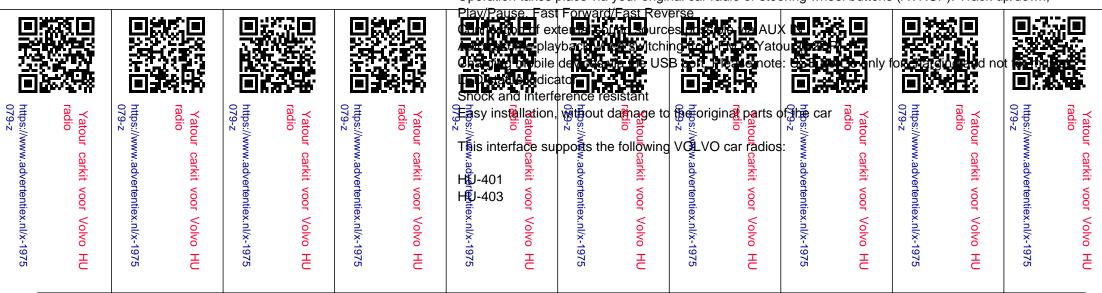

This interface behaves like a CD changer and is also recognized as such by your car radio. This maintains the full functionality of your car. The interface / audio adapter is operated via the buttons on your steering wheel or via those on your car radio.

The integrated Bluetooth module makes it possible to make hands-free telephone calls and to stream music wirelessly from a mobile phone or other connected Bluetooth device.

Product features:

Integrated Bluetooth module with support for wireless music streaming (A2DP), also via Spotify and Deezer

Hands-free telephoning (HFP). Record/hang up via radio or steering wheel buttons No loss of quality or interference (such as with FM transmitters) thanks to the direct connection Operation takes place via your original car radio or steering wheel buttons (AVRCP). Track up/down,
