Refurbished no-bullsh*t multitask/gaming PC built around a beefy R9 3900x.
 Laughs at 400 Chrome tabs while running all games in 100+ fps @ 1440p Ultra settings (I played Horizon
 ZD + FW, GOW, RDR2, Death Stranding, Ghost of Tsushima, etc.), and basically just crushes whatever
 you throw at it while staying quiet too.

Your new "OI' Reliable", and you also have a good upgrade path for the future as AM4 is still getting
 plenty of support.
