Parrot

Bluetooth Module (+) A

Parrot Bluetooth Module will enable the connection between your Pioneer receiver or navigation system to almost any Bluetooth-enabled mobile phone.

Audio streaming enables you to play audio files from your mobile phone (or Bluetooth enabled audio player) via your receiver.

You are able to use the audio streaming and handsfree telephony at the same time, although audio streaming functionalities have no display capabilities.

Voice

Recognition (+) (for
iPhone and Android v2.3 phones)

The Voice Recognition feature enables you to say a name or telephone number stored in your phone book to your receiver or navigation system whilst driving.

The system will then repeat what you have just said for confirmation.

The benefit is that you can keep your concentration on the road whilst driving, with direct access to important features.

Additional Bluetooth Features

Advanced Sound Retriever with BT Audio Support

Android App control

Works with iPhone

Supported Functions iPod Direct allows you to control your Apple-compatible device directly from your car dashboard.

Music playback

Battery charging

Android Media Compatible

Compatible Generations Android Media is currently compatible with Android v2.3 and previous versions that support USB Mass Storage Class specifications

Supported Functions Android App control via Bluetooth / USB

DAB+ Functions Timeshift and Live Pause functions(*)

(*) Requires optional DAB antenna AN-DAB1
Radio
Data System (RDS) (+)

RDS (Radio Data System) is a system for providing information along with FM broadcasts. This inaudible information provides such features as program service name, program type, traffic announcement standby, automatic tuning and program type tuning, intended to aid radio listeners in finding and tuning in to a desired station. Note: RDS service may not be provided by all stations. RDS functions like AF (alternative frequencies search) and TA (traffic announcement standby) are only available when your radio is tuned in to an RDS station.

Traffic
Announcement (+)

The Traffic Announcement (TA) feature lets you receive traffic announcements automatically, no matter what source you are listening to.

For example, if you are listening to an mp3, and a live traffic announcement is being broadcast on a particular radio station, TA will automatically detect the announcement, mute your mp3 and broadcast the announcement as it is being made.

Best
Stations Memory (BSM) (+)

Best Stations Memory scans and memorises the six strongest, clearest stations available on each band.

Auto Alternative Frequency
Search
Auto/Manual Frequency Search
PTY
Search (+)
Advanced
Sound Retriever (+)

ASR stands for Advanced Sound Retriever.

Our ASR sound technology automatically restores the harmonics which were lost during the audio compression process.

ASR adjusts frequency response and sound pressure, especially in the high and low frequency ranges, to revitalise the density and presence of the compressed signal.

The result is an improved sound quality with its staging, density and feeling restored to the level of the original recording.

Graphic Equaliser 5-Band
Graphic Equaliser
High
Pass Filter (+)

When the subwoofer is connected and you

do not want low sound to play from the front or rear speakers, turn the high pass filter on. Only frequencies higher than those in the selected range will be output from the front or rear speakers.
