Acer 23 inch Full HD LCD monitor met ingebouwde speakers.

Incl. HDMI aansluiting

The Acer H33H is a 23-inch monitor with good performance and a low price. For many of you, that's as much of the review you need. For the rest, the Acer H233H not only includes DVI, VGA, and HDMI connectors, but it also includes the required cables for each--a welcome novelty we hope more vendors start including. The display has built-in speakers and performs well when playing games and watching movies. The Acer H233H is a great, cheaper alternative to the Samsung SyncMaster XL2370.

## Design and features

The 23-inch Acer H233H is a 16:9 aspect ratio monitor with a glossy screen, black bezel, and a foot stand. The oval-shaped foot stand is 10.6 inches wide by 7 inches deep. The distance from the bottom of the bezel to the desktop is about 2.6 inches. The back of the panel is a smooth, black matte and it is relatively flat. The panel measures 1 inch thick with its connection options and ventilation system adding another 1.5 inches of thickness, bring the full thickness to 2.5 inches. The panel's full width measures 21.7 inches. The angular bezel measures 0.8 inch wide on the sides and the screen has a slightly frosty matte finish. Its capability to tilt back 15 degrees is its only ergonomic feature.

The Acer can be connected via its HDMI, DVI, or VGA port. In a rare move by a monitor vendor, Acer includes the cables for each connection. It also has an audio input on the bottom bezel. All the connection options are on the back of the panel and are easily accessible, as they are on most monitors. The back of the panel also has four slots for mounting the monitor to a wall.

The on-screen display button array is aligned horizontally in the lower right-hand corner of the bezel and includes the power button, a left and right button which double as volume control, as well as a menu, Auto, and a preset shortcut button. Each button emits a white light from an internal LED, which is great if you are calibrating the monitor in a dark room. To the left of the OSD array is the power button that emits the same light.

---

The OSD includes five presets: User, Text, Standard, Graphics, and Movie. It also includes controls for brightness, contrast, color temperature, and the capability to change the color temperature and the red, green, and blue values individually.

The Acer H233H's 16:9 aspect ratio supports a "Full HD" 1,920x1,080-pixel native resolution. This continues the trend of monitor vendors moving toward 16:9 from 16:10 because high-definition content--in particular 1080p movies--can fit onto a 1,920x1,080-pixel screen in full-screen mode without stretching the image.

Manufacturer's specifications:

Resolution: 1,920x1,080 pixels

Pixel-response rate: 5ms

Contrast ratio: Dynamic Contrast Ratio: 40,000:1

Connectivity: HDMI, DVI, VGA

HDCP compliant? Yes

Included video cables? HDMI, DVI, VGA

Brightness: 300 cd/m<sup>2</sup>

Backlight: CCFL

Panel Type:
