Identifying the correct answer choice requires understanding the relationship between the two variables. The first variable is the number of hours worked per week, and the second variable is the number of hours per week that the person spends on household chores. The relationship between these two variables is that as the number of hours worked per week increases, the number of hours spent on household chores decreases. This is a negative correlation. The correct answer choice is the one that shows a negative correlation between the two variables.
