NIEUW Mystic Majestic Waist Harness (S) *NIEUW

Mystic Majestic Waist Harness 360 Degree pre-shaped back support : The core of the Majestic Harness is an ergonomically shaped back support. The shape and design of the back support is the result of years of research and development on water. The aim was to design the best fitted back support, to create a harness that does not ride up during use. Strong polyester webbings are strategically placed on the back support to spread extreme loads evenly over the back support. This construction gives you the best back support ever. Memory Foam Back Support: The memory foam forms perfectly around your body making it the best fitting. Once you have used the harness it will adjust even more perfect to your body shape, providing you with even more support. Human Kinetic Technology System: Analysis of kite forces, joint movements, load distribution, harness constructions and materials has combined findings into fully redeveloped radical harness designs. H-flex Force Frame: The 'H' in this force frame is formed by 3 Fiberglass battens. 2 slightly angled vertical ones and 1 horizontal. The vertical battens ensure a perfect harness shape and thus good load distribution during hooked sessions. When you 'pop' unhooked tricks the vertical battens 'flex' around the axis of the horizontal batten adding comfort. The horizontal batten also keeps the backside of the harness stiff when there's load on your handle pass leash. So when you crash you'll be still 'in' your harness rather than squeezed 'in between' your harness. A thicker but more flexible plastic plate forms the base of the force frame. All together, freedom of movement, comfort and load distribution are set to a higher level. System Down System "Waist": Locks the spreaderbar down, giving you more

control while performing your manoeuvres. In high kite positions the system activates a side-to-side force on the back support, giving the harness a more dynamic feel. Atomic Back Support: With a newly invented Atomic Back Support, Mystic Majestic is a step ahead in kite competition. The Atomic Back Support is positioned inside the back panel of the waist harness and gives the waist harness a more dynamic shape in all hooked and vertical positions. The back support is connected through the continuous 40mm webbing of the spreaderbar. The spread of forces is divided by the 360° effect which gives maximum comfort, support and freedom of movement. The continued strap is attached to the back support from one side to the other side of the harness (360° effect). When hooked in and riding, the tension on the spreaderbar will be spread over the back support which gives maximum comfort. Kinetic Back Support KM3: Combining the advantages of thermo moulding and neoprene, the mould is fitted with bonding lines to let the harness adapt to the continuous altering of the human body. Flex Edge: While grabbing your board and treading out your tricks the ribcage can encounter the harnesses edge. The

sides of the harness is now more flexible on points where the load distribution allows it. Integrated Handle Pass System Fix: As standard on the Majestic kite harnesses is a Handle Pass System with a PU tube connected to both Delta double power leashrings. Completely removeable if needed. Double Power Leashring: Gives you the ability to split the force on the leashrings in half while the ring itself secured to the strongest part of the harness. Battle Belt Waist Closure Soft Neoprene Edges: The edges of the harness are made of folded neoprene. The double neoprene ensures high comfort and prevents any discomfort from the stiffer parts of the harness. Kite Spreaderbar with protector cover 3D Thermo Moulded Foam Interior and Exterior: By using the process of thermo moulding Mystic are able to add characteristics Mystic needed for comfort and looks. Safety Knife: Cuts flying lines in an emergency. Quick release Clickerbar: 100% Safe and Easy to Use. Mystic's patent pending Clicker Bar is super safe and so easy to use, you can get out on the water even faster. Just as the seatbelt in your car, you can hear the loud click, which gives you the confidence that it is secure.
