

North mono 9m 2017 (465 EUR)

Locatie **Noord-Holland, Amsterdam**
<https://www.advertentieX.nl/x-879677-z>

Hierbij bied ik mijn North mono model 2017 aan, de mono is echt een super kite voor zowel beginners als om te foilen. Door het lage gewicht ook zeer geschikt om mee op kite trip te nemen. Met deze mono kun je het water op als anderen een 11 of 12 nodig hebben. Super makkelijke relaunch waardoor deze echt geschikt is voor beginnende kitesers. Helaas is er begin dit jaar een reparatie aan het doek uitgevoerd, deze is (professioneel) gedaan door Ard kiterepair. Niets op aan te merken en ik vaar er zelf alweer een jaar mee.

Ik verkoop deze kite omdat ik north dice ben gaan varen.

Mocht je vragen hebben of eventueel willen proefvaren, neem even contact op.

North over de mono:

The Mono is a modern one strut design best suited to the accomplished Freerider wanting to travel light and advance on a Twin Tip, Directional or Foil. Stripping it back to basics, the Mono takes inspiration from the Neo where a soft bar feel and linear power development are key. The Mono is easy to relaunch, offers a stable canopy and a very smooth handling. A very light but also very robust kite in a simple package. Completely new in the range is the absolute light wind machine, the 15sqm. Get ready to enjoy a playful ride powered by a simple design.

PERFORMANCE FEATURES

- excellent depower

- quick and easy to relaunch

- active steering

- no water

- no bar

- no gusts

- soft bar feel and linear power development • quick turning with better follow-through

TECH FEATURES

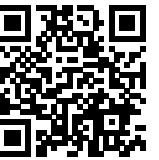

- moderate Delta Design

- and 5 lines compatible

- light and robust one strut design

WHAT'S NEW ON MONO 2017

The focus for the new Mono 2017 was to step up the bar feel and responsiveness while reducing flutter,

which is the main drawback of one strut kites in general.

- more narrow tips

The narrower tips twist in the back a bit more, which increases the tip angle of attack and thus helps to reduce flutter. It also reduces the total amount of cloth near the tips of the kite that is prone to flutter when the kite is turning. This new flutter reducing construction also enables a more precise bar feedback.

- better turning

Less flutter in the outer tip during a turn means that the new Mono 2017, compared to the 2016 model, has similar quickness initiating a turn, but better follow-through. For example, a kite loop on the new Mono completes tighter and quicker than on the old Mono.

- shorter bridles

The 2017 model has shorter bridles which means less chance of tangles. Additionally the more complex structure of the bridle leads to better LE support and better stability.

- smaller LE diameter

A smaller leading edge diameter and a slightly flatter canopy (in some sizes) make the Mono 2017 more stable in gust.
