Exclusivity, technology, craftsmanship. A limited edition. The new Diavel Titanium, produced in a limited series of just 500 numbered bikes, was created to satisfy the demands of those in search of an even more radical degree of customization and refinement. The philosophy inspiring the Diavel Titanium is that of creating an exclusive bike enhanced with components and accessories made in sophisticated and innovative materials.

DesignThe stance of the Diavel is that of readiness, dominance, and confidence bordering on superiority. Lateral radiators add muscle to its broad "shoulders," which then taper down across the engine and into the belly-fairing with its oil cooler, giving shape to the athlete.

A massive 240 section rear tyre is the perfect example of how Diavel designers used a no-compromise attitude when applying their wish list of features. The sheer width of rubber communicates so much power and style that the R&D team vowed to find, and succeeded in finding, a way to make it handle - even if they knew the image would send a seismic shock through the industry.

The Diavel is a true Ducati, born from a passion for motorcycling and designed to deliver authentic Ducati performance in every respect.

TitaniumThe Diavel Titanium is a limited edition celebration of high-tech craftsmanship. It takes the category-busting Diavel, and elevates it to a new level of refinement and desirability through the use of premium technical materials and finishes along with hand-applied artisanal details. The aggressive Diavel stance is made even stronger by larger, more imposing air intakes formed in carbon fibre; while the unmistakable profile that recalls a sprinter crouched at the starting blocks is now formed with a titanium

tank, carbon and titanium seat cover, and a premium Alcantara/leather seat.

determination and a delicate touch, and the result is a frontal area that looks like a power athlete on the starting blocks," explains the team at Ducati Design responsible for the project. "With the front wheel kept close to the Diavel's body and using the short tail of a sport bike, we were able to blend this muscular design with a chassis that matched.;
