

## Asus gl502vs gaming laptop - 4k amp gtx 1070 (850 EUR)

Locatie

Noord-Holland, Amsterdam

<https://www.advertentieX.nl/x-914571-z>

Hi, I'm an expat living in Netherlands. I'm in to gaming and have purchased this laptop from Amazon.de slightly over 2 years ago (still have the invoice and will provide it upon purchase). The reason I am selling it now is because I have purchased a newer model. It is still capable of pulling off good fps in many top tier games (PUBG, Fortnite, Apex Legends all around 60fps in 1080p in ultra settings, in medium-hi settings you would easily get 100fps and above) so it's a very good laptop for gaming. VR ready and working extremely well with both HTC Vive & Oculus Rift.

It has only 1 minor defect on the screen which is white spots (it's shown on photo 4), it's hard to spot when the screen is all over black, and it's simply not there when there is a picture on the screen (photo 5). Other minor defect is a bit of paint worn off on the lid (photos 6 & 8).

The brand new equivalent laptops are around 1600-1800 Euro's (without a 4K display). I am asking for a very reasonable price for this great laptop, that can be easily used beyond gaming, such as content creation, A/V editing, business purposes etc.

This config also have 500GB SSD & 1TB HDD. So you can install your demanding games on SSD to gain significant loading speed, where you will have a substantial storage are where no ssd speed is needed. It has 16GB of dual way RAM, which is also making games run a lot more fps (20-30% more) than the single way RAM versions.

I will only respond to serious offers, so please feel free to ask additional questions.
